

## LETTER TO THE HONORABLE SENATOR JOHNNY ISAKSON

The Honorable Senator Johnny Isakson  
One Overton Park  
3625 Cumberland Blvd  
Suite 970  
Atlanta, GA 30339

Dear Senator Isakson:

I'm writing you for help in getting the FDA to accept the petition to ban aspartame enclosed. In 2002 I filed a petition to ban aspartame, and the law allows 180 days. They sent a letter saying they had more important things to do. In 2007 I filed again saying it was based on an imminent health hazard. I was told later it was added to the original. An attorney told me the letters about having more important things to do have been used for years to postpone doing what FDA doesn't want to do.

In 2009 I received a call from the FDA by an angry agent stating the petition to ban was not going to happen. He said some from the FDA had written President Obama they were broken and whistleblowers feared reprisals. Obama's answer was that the FDA answer petitions going back to 2007. I told the agent my original petition goes back to 2002. When I stated I have lectured all over the world on aspartame and people are sick and dying I was told: "So what, we need to depopulate". So much for the FDA protecting the public.

In 2014 FDA answered the petition as well as that of Dr. Ken Stoller's. The problem was neither Dr. Stoller or myself ever received a letter telling us, the reason being the FDA knew since they were lying I would have appealed the decision. The only reason I ever knew about it is the National Law Review got them and published them years later.

FDA Dr. Joseph Thomas told me I could write another petition to ban based on studies done since 2002 which I did. Because the FDA always asks what is the mechanism by which aspartame causes disease when Dr. H. J. Roberts wrote the 1000 page medical text, "Aspartame Disease: An Ignored Epidemic" I asked him to be sure to give the mechanism by which aspartame triggers or precipitates diseases, and he did.

So when I petitioned the FDA to ban aspartame I included the 1000 page medical text. Enclosed is Dr. Thomas' response dated September 26, 2017 and I've written him several letters since.

Notice in the 2nd paragraph he says I heavily relied on a range of events dating back to the 1970s when aspartame was investigated. I ask you, Senator, aren't these references valid to any petition to ban when it was the FDA themselves who admitted aspartame was illegally on the market. I'm enclosing the published article "No Safe Dose of Aspartame", National Health Federation: [https://thenhf.com/wp-content/uploads/2018/06/HFN\\_2012-2.pdf](https://thenhf.com/wp-content/uploads/2018/06/HFN_2012-2.pdf)

The congressional records are on my web site, [www.mpwhi.com](http://www.mpwhi.com)

On August 1, 1985, FDA toxicologist, Dr. Adrian Gross, told Congress that at least one of Searle's studies "has established *beyond any reasonable doubt* that aspartame is capable of inducing brain tumors in experimental animals and that this predisposition of it is of extremely high significance.... In view of these indications that the cancer causing potential of aspartame is a matter that had been established *way beyond any reasonable doubt*, one can ask: What is the reason for the apparent refusal by the FDA to invoke for this food additive the so-called Delaney Amendment to the Food, Drug and Cosmetic Act?"

The Delaney Amendment makes it illegal to allow any residue of cancer-causing chemicals in foods. Dr Gross concluded by asking, "Given the cancer-causing potential of aspartame, how would the FDA justify its position that it views a certain amount of aspartame as constituting an allowable daily intake or "safe" level of it? Is that position in effect not equivalent to setting a "tolerance" for this food additive and thus a violation of that law? And if the FDA itself elects to violate the law, who is left to protect the health of the public?" *Congressional Record* SID835:131 (8/1/85)

Keep in mind that Senator John McCain just died of a glioblastoma brain tumor. This is what the FDA were so worried about back then. Here is a Newsweek article about McCain traveling in a motor home with Diet Coke in the fridge.

<https://www.newsweek.com/mccain-rolls-through-new-hampshire-snow-be-damned-95777> Nine years earlier to the day Senator Ted Kennedy died of a brain tumor. Even VP Biden's son, Beau died of a brain tumor. St. Jude Hospital is full of babies and children born with brain tumors from mothers who used aspartame during pregnancy.

In the movie "Sweet Misery: A Poisoned World" [https://www.youtube.com/watch?v=Z17\\_8FDzuJE](https://www.youtube.com/watch?v=Z17_8FDzuJE) you see Former US Department of Justice attorney Ed Johnson who also got one of the brain tumors from drinking diet drinks, as well as Bob Mehl who recently died. After taking the case histories for 28 years I can tell you there are so many brain tumor cases they are just in stacks. I still think of a 28 year old attorney, Kelly Motlick with a head full of aspartame brain tumors crying before she died "I want to live, I want to live, I want to live."

Senator, note Dr. Gross said how can you even set an allowable daily intake of something that has been proven to cause cancer, its a violation of the law. Next in the letter from Dr. Thomas he discusses the allowable daily intake which Dr. Gross said is impossible to set. Not only that, the ADI was raised when carbonated beverages were approved because they knew it would be abused, especially since aspartame is addictive. How can you even question Dr. Adrian Gross who testified since he investigated aspartame, had a task force set up that exposed G. D. Searle and then asked for their indictment for fraud. The task force was so horrendous against G. D. Searle they sued to get it off the record. Yes, we have it.

Dr. Thomas doesn't like anecdotal accounts, and says they can't prove or deny. One I used was on William Reed. His family was making burial arrangements and told me he wouldn't live through the day. The man was on NutraSweet and having seizures. You will notice on the FDA's own report there are four types of seizures reported. [http://www.mpwhi.com/92\\_aspartame\\_symptoms.pdf](http://www.mpwhi.com/92_aspartame_symptoms.pdf) Even G. D. Searle's study, 52 week oral toxicity, on 7 infant monkeys showed 5 had grand mal seizures and 1 died. It was pivotal in the approval process. Pivotal studies are your best and if this was the best Searle had to offer I can imagine what most showed. They actually marketed a seizure triggering drug for

human consumption. After taking away the diet soda with aspartame William Reed was consuming his seizures stopped. His physician was shocked. They stopped the burial arrangements. It's almost 20 years later and William Reed who was having 6 seizures a day never had another one after giving up aspartame. He is alive today because I told him to stop the aspartame. This case was used to show when the FDA approves a seizure triggering drug people are going to die from seizures. Remember Flo Jo, a runner? She had a diet soda in hand running when she had a seizure and died. Dr. Russell Blaylock, neurosurgeon wrote an athlete alert: [http://www.wnho.net/aspartame\\_msg\\_scd.htm](http://www.wnho.net/aspartame_msg_scd.htm)

Don Rumsfeld's buddy, Arthur Hull Hayes, was appointed as FDA Commissioner to get aspartame approved and over-rule the FDA Board of Inquiry that revoked the petition for approval. It was a done deal. That's when G. D. Searle sued to prevent the FDA Commissioner, Jeri Goyan, from signing it into law. According to his wife Goyan was called at 3:00 AM by someone from President Reagan's transition team and fired. President Reagan was doing a favor for Don Rumsfeld who was also on his transition team. Rumsfeld said he would "call in his markers" and he did. He actually wrote an executive order preventing Dr. Goyan from signing the revoked petition for approval into law. Why wasn't G. D. Searle indicted for fraud? Both U.S. Prosecutors, Sam Skinner and William Conlon hired on with the defense team and the statute of limitations expired.

Dr. Thomas says all these events were considered in the original petition. Then why wasn't aspartame immediately banned? It was approved through political chicanery and the FDA admitted it wasn't safe. Here is the Board of Inquiry Report: [http://www.wnho.net/fda\\_petition1.doc](http://www.wnho.net/fda_petition1.doc) . It says aspartame could not be proven safe and caused brain tumors. Why is this not relevant? Dr. Thomas tells me he addressed this issue. How does one address the fact a chemical poison could not be proven safe but yet was marketed for human consumption?

Dr. Thomas mentions the CDC investigation. When you have a poison on the market you have to continue to cover-up, one lie on another. There were so many complaints on aspartame that in the Senate it was mentioned the FDA was sending victims to the AIDS Hotline. So CDC had the job of investigating. You're talking about mood alteration, seizures, cardiac arrest, myocardial infarctions, death, blindness etc. How was G. D. Searle going to get around this investigation? The CDC didn't report it to the public at all. What they did was have someone write a summary that contradicted the report and put it on their web site where it remains to this day. In the documentary which confirms what I'm saying to you I hold up the real investigation. You can see it for yourself: [https://www.youtube.com/watch?v=Zi7\\_8FDzuJE](https://www.youtube.com/watch?v=Zi7_8FDzuJE) When I asked the CDC why they allowed the phony summary on their web site I was told because the doctor who wrote it retired and they couldn't take it down. If the investigation had not been damning they would have listed it on their web site but they couldn't let the public see a word of it.

Here comes the next lie about aspartame's scientific studies showing safety. When 60 Minutes did an expose on aspartame Dr. Ralph Walton did research for them showing 92% of independent, scientific peer reviewed studies show the problems, and if you eliminate 6 the FDA had something to do with in their cover-up and one pro-industry study 100% of these studies show the problems. So the question is how could industry studies show safety. They couldn't show safety originally so how could they do so now? This is why the FDA wanted them indicted for fraud. They would do such things as remove brain tumors, put the rats back in the study and when they died resurrected them on paper. The poison breaks down to diketopiperazine, the brain tumor agent. Here is Dr. Walton's research for 60 Minutes: <http://www.lightenyourtoxicload.com/wp-content/uploads/2014/07/Dr-Walton-survey-of-aspartame-studies.pdf>

Next in the letter comes this claim that scientific agencies and regulatory bodies have reviewed the studies in addition to the FDA. It just isn't so. There were no studies in England and it was approved through a business deal with a Paul Turner. In this email is the famous Guardian article exposing this: [http://www.who.net/how\\_aspartame\\_got\\_approved\\_in\\_england.htm](http://www.who.net/how_aspartame_got_approved_in_england.htm) Parliament was outraged. Because of this Food Standards was set up to keep free of industry, now they are part of it. When I was lecturing in New Zealand I visited Food Standards and they told me they didn't do any studies either and rubberstamped the FDA approval. Health Canada turned down approval to begin with and finally industry got to them as well. Ask any country that approved aspartame for their own studies and you will see there is none. They can only provide studies by industry or those they paid. They have a front research firm called "International Life Sciences Institute" or ILSI founded by Coca Cola.

Since aspartame cannot be proven safe there is no way a country could do studies and show safety.. At one time aspartame was listed with the pentagon in an inventory of prospective biochemical warfare weapons submitted to Congress. Below my signature you will see the testimony of Roger Williams when he tried to get Parliament to ban it and identifying it as a biochemical warfare weapon.

The next paragraph goes into the Ramazzini Studies which FDA refuses to accept. The Ramazzini Institute is an independent, non-profit cooperative of more than 27,000 associates, dedicated to the promotion of scientific research for the prevention of cancer. They are world renowned for their cancer research and the prestigious Ramazzini studies on aspartame were so outstanding that Dr. Morando Soffritti was given an award only received twice in history. The studies were peer reviewed by 7 world experts. That wasn't good enough for FDA. EFSA complained the rats had respiratory disease. Dr. Soffritti told them, of course the rats had respiratory disease as this was a lifetime study and the rats were dying. Respiratory disease is the dying process.

Dr. Herman Koeter of EFSA finally confessed and resigned admitting "they were pressured by industry to hijack science." The aspartame study is on-going and the public have become the lab rats and guinea pigs. Dr. Russell Blaylock after reviewing the Ramazzini studies warned the studies "should terrify mothers and all those consuming aspartame sweetened products. This was a carefully done study which clearly demonstrated a statistically significant increase in several types of lymphomas and leukemias in rats. Both of these malignancies have increased significantly in the country since the widespread use of aspartame. ..The type of damage was a duplicate of that associated with cancers. Along with this most recent study, this means that drinking a single diet cola sweetened with aspartame could be responsible for developing lymphoma or leukemia." Now FDA is allowing aspartame in leukemia drugs!

Yet Senator, the FDA can simply protect industry by saying they are not accepting the studies. Study after study show constant horrors like dementia, metabolic syndrome, obesity and strokes all of which are ignored today by FDA. The Trocho Study by Dr. M. Alemany showed the formaldehyde converted from the free methyl alcohol in aspartame embalms living tissue and damages DNA. How could any study be worse? The body is being embalmed and the tissues are turned to plastic as brought out by Dr. Woodrow Monte in his medical text, "While Science Sleeps: A Sweetener Kills". The Harvard Study on humans showed the same lymphomas and leukemia as the Ramazzini studies and FDA just ignored it. Harvard said their study was the strongest and oldest but industry got to them quick and the next day they apologized for publishing it. That's the devil power of industry.

Dr. Monte calls aspartame a killing machine. He says on the back of his book, "Since aspartame was released in 1981, Alzheimer's deaths have increased 10,000%, Autism 2500% and Lupus 300%, while autoimmune diseases have reached epidemic proportions. Multiple Sclerosis, Type II Diabetes and Rheumatoid Arthritis are all out of control too."

Can it get any worse? When Jerome Bressler of the FDA retired I called to thank him for exposing aspartame in his report. He said, "Didn't you realize something was missing?" I said I did but didn't know what it was. Then he told me about two studies FDA had removed from the public and he was terribly concerned because the public was using it without knowledge of what could happen to them. It took me 8 years to find the information and add it back to the Bressler Report. [http://www.mpwhi.com/complete\\_bressler\\_report.pdf](http://www.mpwhi.com/complete_bressler_report.pdf) It turned out to be teratology studies showing neural tube defects, spina bifida and cleft palate for starters. Here is Dr. Monte's last chapter on aspartame and autism: <https://rense.com/general96/asparautism.html> MIT states by 2025 one out of two babies will be born autistic! Need I say more.

On page 2 of Dr. Thomas' letter he says the claims are unsubstantiated and represent a misunderstanding of aspartame and its metabolism. Dr. Thomas has a copy of the medical text by world expert, the late Dr. H. J. Roberts and he explains the metabolism of aspartame. I was trained by Dr. Roberts. Read how Dr. Thomas twists the facts "The other two metabolites, aspartic acid and phenylalanine, are amino acids that are found naturally at much higher levels in common dietary protein sources. " Half a truth is a whole lie.

Certain amino acids cannot be isolated like aspartic acid and phenylalanine. Aspartic acid isolated is an excitotoxin and stimulates the neurons causing brain damage. Dr. John Olney who tried to prevent approval of aspartame founded the field of neuroscience called excitotoxicity. Neurosurgeon Russell Blaylock, M.D. wrote the book on it, "Excitotoxins: The Taste That Kills". Here is an article on "Brain Cell Damage From Amino Acid Isolates". Note that it was written by Dr. James Bowen and Dr. Arthur Evangelista who use to work for the FDA. He left because of the corruption and witnessed those who changed reports to benefit industry, Dr. Bowen has Lou Gehrigs Disease from aspartame and has devoted his life to warning others. [http://www.wnho.net/aspartame\\_brain\\_damage.htm](http://www.wnho.net/aspartame_brain_damage.htm) Note they say: The transport of excitotoxins across the blood brain barrier and within the CSF causes several reactions to occur. 1) The excitotoxins stimulate the nerves to fire excessively. 2) The normal enzyme actions required to offset the induced, repeated firing of these neurons are negated by the phenylalanine and aspartic acid.

I have discussed the formaldehyde, a Class A carcinogen, which was shown in the Trocho Study to embalm. The reason aspartame requires a PKU warning is because the phenylalanine is 50% of the aspartame molecule and phenylketonurics cannot metabolize it. In milk and meat phenylalanine may be 5% or 6% but not 50% of the molecule. Yet the FDA allowed 17 dairy products to have aspartame unlabeled.

As to Alzheimers maybe Dr. Thomas needs to keep up with research on aspartame: <https://articles.mercola.com/sites/articles/archive/2014/06/26/aspartame-methanol-alzheimers.aspx> Memory loss is so prevalent with aspartame its #9 on the FDA list of 92 symptoms.

The rest of Dr. Thomas' letter again is just nonsense. I'm the one who asked Dr. H. J. Roberts to publish

a medical text on "Aspartame Disease" because FDA always wants mechanisms. He did and dedicated the medical text to me. It constantly gives the mechanisms by which it causes disease and references. There are 25 pages of bibliography. He denies scientific evidence on anti-aspartame web sites. Senator, take a look at the Aspartame Toxicity Center, [www.holisticmed.com/aspartame](http://www.holisticmed.com/aspartame) Tell me if you see a lack of scientific evidence since it was set up to give the public the real facts and exposes propaganda. Notice he exposes the "reviews" that attempt to coverup the real facts. Likewise take a look at my site, [www.mpwhi.com](http://www.mpwhi.com) You will notice you see the FDA's own list of 92 symptoms, the congressional records, the CDC investigation and the UPI investigation. Also look under scientific peer reviewed research.

Senator Isakson, the modus operandi of the FDA is this. You write a Senator or Congressman with your complaint. It is sent to the FDA who writes back some of the propaganda you see in their letter. Then it's sent to the correspondent and nothing gets done. It's the propaganda of the FDA they receive from industry that we are complaining about.

How do we get something done? How do we stop the FDA from giving out dishonest information and present facts. Dr. James Bowen wrote the FDA 30 years ago and told them aspartame was mass poisoning. The FDA sent out an agent to tell him of their displeasure on receiving the letter and only with hostility accepted 29 more cases of Aspartame Disease. Aspartame is a disease and Dr. Roberts said its because there is a pattern and the symptoms are predictable.

Notice the petition lists over 40 peer reviewed studies and they know they can't denounce them all so they don't want to be put in the position. Aspartame has caused such an epidemic of obesity they are blaming it on sugar and creating sugar taxes. I heard a news brief where they want to remove anything with sugar from hospitals down to sweet tea and juice but leave in artificial sweeteners. Since aspartame will interact with the drugs they give it can cause the death of thousands. Aspartame drugs were even prescribed for me and I stopped breathing three times. Here is my story: [http://www.mpwhi.com/iatrogenesis\\_aspartame.htm](http://www.mpwhi.com/iatrogenesis_aspartame.htm)

Because I didn't want this to happen to anyone else I provided this hospital form: [http://www.mpwhi.com/aspartame\\_hospital\\_form.htm](http://www.mpwhi.com/aspartame_hospital_form.htm) You see the entire chapter on drug interaction from "Aspartame Disease: An Ignored Epidemic". Consider aspartame is pushed on diabetics when the facts are that it can precipitate diabetes (even proven on scientific peer reviewed research), simulates and aggravates diabetic retinopathy, destroys the optic nerve from the methanol, causes diabetics to go into convulsions and even interacts with insulin. Dr. Roberts was a diabetic specialist and saw these patients in the trenches of medical practice, His entire chapter on aspartame and diabetes is included in this article on the diabetic epidemic:

<http://rense.com/general96/aspartame-creates-diabetic-and-obesity-epidemics.html>

September is Aspartame Awareness Month and this letter will be distributed throughout the world for the public to know the truth. This enclosed petition to FDA to ban aspartame should by law be accepted and answered in the allotted time by law. See below for Parliamentarian Roger Williams' testimony to attempt to outlaw aspartame in the UK.

Most importantly, is the end of the petition to ban. Here I ask the FDA what is it they need to ban aspartame. Almost 100 per cent of independent scientific peer reviewed studies show the problems aspartame causes from diabetes, metabolic syndrome, obesity and strokes to myocardial infarctions and

dementia. Their own FDA report lists 92 symptoms from 4 types of seizures to coma, blindness, and death. Serious investigations such as by the CDC and the 8 month investigation by UPI always show aspartame was never shown to be proven safe. In the Task Force by FDA themselves Dr. Adrian Gross explained:

"They (G.D. Searle) lied and they didn't submit the real nature of their observations because had they done that it is more likely that a great number of these studies would have been rejected simply for adequacy. What Searle did, they took great pains to camouflage these shortcomings of the study. As I say filter and just present to the FDA what they wished the FDA to know and they did other terrible things for instance animals would develop tumors while they were under study. Well they would remove these tumors from the animals."

An FDA Toxicologist explained why their experiments were invalidated: "It is highly unlikely the FDA Investigative teams found all of the problems with G. D. Searle's studies. G. D. Searle seemed so intent on covering up their misconduct, that it is quite likely that they were able to hide many of the problems from the FDA. <http://www.wnho.net/whopper.htm> This investigation showed such horrendous behavior by the manufacturer Searle sued to get the information removed from public inquiry. We have all the Task Force records.

Even in testimony to the Senate by the FDA themselves (Dr. Adrian Gross) explains that aspartame not only was not proven safe but is on the market illegally because it violates the Delaney Amendment since it caused brain tumors and brain cancer. FDA scientist Dr. Adrian Gross even mentions the FDA should not even been able to set an allowable daily intake because it causes cancer.

Do you realize what this means? We have over and over and over again given FDA all the evidence for removing aspartame from the market. When Dr. H. J. Roberts was writing the 1000 page medical text, "Aspartame Disease: An Ignored Epidemic" I asked him to give the mechanism by which aspartame precipitates or triggers all these epidemic diseases being seen in the population because FDA always asks. So I sent the text to FDA and Dr. Thomas denies the mechanisms are there. I had to actually quote some of the mechanisms from the book so the public could see the FDA was lying. I think they would lie if the truth would do.

For over 3 decades the FDA has ignored or rebutted all independent, scientific peer reviewed studies, ignored all the investigations that have shown aspartame was never proven safe, and even disregarded their own FDA records which testify aspartame is on the market illegally even added to congressional records.

Victims, researchers and physicians write their Senator or Congressman, just as I'm writing you now, and they refer the issue back to the FDA. The FDA then sends propaganda back to the senator or congressman who in turn sends it back to the writer. Nothing gets done. This is the FDA's modus operandi.

Dr. Woodrow Monte even took the issues of seizures and blindness to the Supreme Court who wouldn't even hear it. Just recently U.S. District Judge William H. Orrick dismissed a class action on aspartame having to do with deceptive advertising of diet soda when in fact, it has caused an epidemic of obesity. Not only were 40 studies used but the actual confession of the National Soft Drink Assn, now American Beverage, in their protest of using aspartame because it causes you to gain weight. They used Dr. Richard Wurtman's affidavit: "Aspartame has been demonstrated to inhibit the carbohydrate-

induced synthesis of the neurotransmitter serotonin (Wurtman affidavit). Serotonin blunts the sensation of craving carbohydrates and this is part of the body's feedback system that helps limit consumption of carbohydrate to appropriate levels. Its inhibition by aspartame could lead to the anomalous result of a diet product causing increased consumption of carbohydrates."

If you have complied with everything necessary to ban a product and the FDA refuses to do anything because of the power of industry what is the answer to stop the mass poisoning of the public? There have even been congressional hearings.

In 1985 Senator Howard Metzenbaum wrote a bill to have independent studies on the problems they were seeing in the public from aspartame including what it does to the fetus, the interaction with drugs, seizures and even behavioral problems, especially in children. It never got out of committee. How could anyone in Congress not want to protect the public by getting to the bottom of why these epidemics were occurring after the marketing of aspartame? Over 30 years later these epidemics from aspartame continue and no doubt millions have died. No studies have shown safety of this drug unless they were controlled or financed by industry. As an example, when Dr. Diana Dow Edwards, was doing a study for Monsanto and there were problems Monsanto immediately withdrew their funding. Should I have to say anything more. When Dr. Ralph Walton did an independent study on aspartame Monsanto wouldn't even provide the aspartame. It was done on humans below the ADI. The study had to be stopped when the administrator lost his vision in one eye, another got conjunctival bleeding, and subjects were saying they were being poisoned, <https://www.sciencedirect.com/science/article/pii/0006322393902518>

I end with the words of Dr. James Bowen to the FDA years ago: "This is mass poisoning of the public." Since it was never proven safe the lab rats and guinea pigs are the public.

Sincerely,

Dr. Betty Martini, D.Hum, Founder

Attachments: Letter from FDA and others

"UK Parliamentary Information Management Services [PIMS ] Early Day Motion EDM 1517

TOXIC PROPERTIES OF ASPARTAME 30.01.2006 January 30, 2006

Williams, Roger

That this House expresses deep concern over the numerous independent toxicological studies and thousands of subjective reports attesting to the toxic effects of the artificial sweetener aspartame on human health; notes that aspartame, once patented as a biochemical warfare agent, is the synthetically produced methyl ester of a dipeptide which is readily broken down in the gut to release methanol; further notes that in naturally occurring foodstuff methanol is either not released into the body or present together with natural defence mechanisms that mitigate its toxic effects; recognises that

methanol is a well known poison and is further converted into formaldehyde, a class A carcinogen according to the World Health Organisation's International Agency for Research on Cancer; accepts that severe health concerns occur from the gradual accumulation of formaldehyde in the body which cannot be excreted and that further research has shown that long term low level exposure to formaldehyde induces leukaemia and nasopharyngeal cancer in humans; acknowledges that of the 166 studies conducted on aspartame's safety deemed relevant to humans, 92 per cent. of independently sponsored studies identified one or more problems with aspartame's safety whereas industry-sponsored studies found unanimously in favour of aspartame's safety; and urges the Government to abide by the precautionary principle and make use of Statutes 13 and 16 of the 1990 Food Safety Act to remove aspartame from the permitted list of additives on the UK market."
